

**May 7, 2010
Colorado Springs**

Open to all U.S. and Canadian undergraduate and graduate students

The purpose of this competition is to stimulate interest by college students in national security-related innovations and expose novel technologies to a broad audience including industry, academic, and government organizations involved in aerospace, defense, security, and first responder activities. Unlike traditional business plan competitions, the goal is *not* for students to demonstrate how *they* will exploit the opportunity. Instead, students should apply critical analytical skills to determine *why* a new technology has the potential to meet an identifiable national security need. At least one student member of the team must have been actively involved in the development of the technology being presented. The technology must not currently be licensed to any business.

\$5000 First Place

Registration Deadline February 3, 2010
